

TCS Campus at Adibatla

Adibatla, Telengana

CLIENT : Tata Consultancy Services Limited
SCOPE : Master Plan + Architecture + Interior Design
PROGRAM : Software Development Campus
PLOT AREA : 75 Acres
BUILT-UP AREA : 41,22,000 Sq.Ft.
STATUS : Phase 1: Completed
Phase 2: Ongoing

The facility is proposed with sustainable features such as rain water harvesting, free cooling, solar panels, sustainable toilet fixtures, waste management etc and is proposed to be a LEED rated facility.

The Campus allows a wide variety of open spaces designed to promote interaction of all the senses with nature through the use of waterscape, hardscape, softscape, shading elements, grade changes and native trees. By capturing and storing monsoon rains and a careful management of waste water for irrigation, and the use of native drought tolerant species, a lush landscape will replace the current barren desert. With concept design by SAGA Architecture, the goal was to have a campus that readily accommodates the large number of inhabitants while still provided numerous spaces and vistas that provide personal space.
